The omnidirectional flight is defined as follows: (5) $D(i) = 1$ $i = 1, \dots, d$ where $\text{randi}([1, d])$ generates a random integer from 1 to d , $\text{randperm}(k)$ creates a random permutation of integers from 1 to k , and r_1 is a random number in $(0, 1]$. The diagonal flight in a d -D space is inside a hyperrectangle, which is bounded by any 2 to $d-1$ coordinate axes. The movement of a hummingbird in 3-D space ...

The simplest and earliest types of bridges were stepping stones. Neolithic people also built a form of boardwalk across marshes; examples of such bridges include the Sweet Track and the Post Track in England, approximately 6000 years old. Undoubtedly, ancient people would also have used log bridges; that is a timber bridge that fall naturally or are intentionally felled or placed across streams.

A river is a natural flowing watercourse, usually freshwater, flowing towards an ocean, sea, lake or another river. In some cases, a river flows into the ground and becomes dry at the end of its course without reaching another body of water. Small rivers can be referred to using names such as stream, creek, brook, rivulet, and rill. There are no official definitions for the
