However, the entropy at absolute zero can be equal to zero, as is the case when a perfect crystal is considered. The Nernst-Simon statement of the 3rd law of thermodynamics can be written as: for a condensed system undergoing an isothermal process that is reversible in nature, the associated entropy change approaches zero as the associated ...

Third Law of Thermodynamics - Entropy at Absolute Zero

We start with an average, or measurement of the center, of a data set, which we will denote by m .; Next, we find how much each of the data values deviates from m . This means that we take the difference between each of the data values and m .; After this, we take the absolute value of each of the difference from the previous step. In other words, we drop any negative signs for any of the differences.
