Class 11 Geography NCERT Solutions Chapter 14 Movements of Ocean Water

Because sea otters eat sea urchins, the loss of sea otters in turn has increased the number of sea urchins there. And because sea urchins consume kelp beds, kelp beds there are disappearing, removing a significant source of food for other ocean life (Estes et al., 2011). Another example of the ocean chain reaction concerns whales themselves.

She and Mrs. Hempstock seem to know all about the opal miner's death. Lettie then takes the narrator out to the duck pond, which she calls the ocean—according to Lettie, she and her family traveled across it when she was a baby. There's a dead fish on the water's surface, and Lettie cuts the fish open and extracts a sixpence from it.

The semi-diurnal range (the difference in height between high and low waters over about half a day) varies in a two-week cycle. Approximately twice a month, around new moon and full moon when the Sun, Moon, and Earth form a line (a configuration known as a syzygy), the tidal force due to the Sun reinforces that due to the Moon. The tide's range is then at its maximum; this is called the spring ...
