Existing firing schemes for the firing of three-phase SCR bridge rectifiers used for industrial applications employ equidistant firing pulses. Mostly they consist of six identical phase control circuits. In this paper a compact scheme using minimum integrated circuit components is described. It has a fast response for triggering angle correction and

In accordance with the present invention, a firing circuit for a controlled three-phase bridge rectifier is provided which is simpler and more economical in construction than prior art devices of this type by virtue of the fact that: (1) the circuit requires only three simple low cost, single-phase transformers for supplying both timing

The advantage here is that 3-phase rectification circuits can be used to power many industrial applications such as motor control or battery charging which require higher power requirements than a single-phase rectifier circuit is able to supply. 3-phase supplies take this idea

The above thyristor firing circuit is similar in design to the DC SCR circuit except for the omission of an additional "OFF" switch and the inclusion of diode D 1 which prevents reverse bias being applied to the Gate. Enerpro's gate delay determinator circuit is based on the Ainsworth three-phase PLL circuit and implemented with a proprietary ASIC. This circuit adjusts the gate delay firing angle in negative proportion to the SIG HI command.

Gate drive phase balance is typically less than $\pm 1^\circ$.
