The largest and most complex marine algae are called seaweeds, while the most complex freshwater forms are the Charophyta, a division of green algae which includes, for example, *Spirogyra* and stoneworts. No definition of algae is generally accepted.

Algae - Wikipedia

Green algae. Blue-green algae. Yellow-brown algae. Golden algae. Most species of algae in freshwater lochs are microscopic in size, though some types of algae - stoneworts - form larger growths or colonies. Microscopic algae may be either: free-floating, attached to the sediment, stones or vascular plants.

Freshwater algae | NatureScot

Chinese Algae Eaters need at least 30 gallons of space with a pH of around 6.5 to 7.5 and a temperature between 74 and 80 degrees. Typically, Chinese Algae Eaters spend their time at the bottom of the tank searching for algae to eat. As a result, you need to decorate the bottom of your tank with fine sand, lots of plants, and more. 13. Rabbit Snail
