If you don't already have Zucrow's Gas Dynamics, then perhaps you should. Excellent, lucid read. Every equation is derived, which is most helpful. Chapter 4 is especially interesting (1D isentropic flow with area change), My only "complaint," if you could consider it so, is that the treatment for Mass Addition in Chapter 9 was far too brief.

Volume one of the complete and comprehensive guide to gas dynamics The first in a two-volume series, Gas Dynamics, Volume 1 provides the first half a comprehensive treatment of the subject of gas dynamics. Beginning with a review of the fundamental principles, the text then moves on to fully explore other relevant areas of gas dynamics.

Gas Dynamics, Volume 1 by Maurice Joseph Zucrow

The book extends and supplements material presented in the first volume, placing major emphasis on the application of the method of characteristics to steady and unsteady multidimensional flows. A review of the physics of flow governed by hyperbolic partial differential equations serves as a basis for examining numerical solutions for such flows. Numerical methods for problems involving the ...

Gas kinetics is a science in the branch of fluid dynamics, concerned with the study of motion of gases and its effects on physical systems. Based on

the principles of fluid mechanics and thermodynamics, gas dynamics arises from the studies of gas flows in transonic and supersonic flights. To distinguish itself from other sciences in fluid dynamics, the studies in gas dynamics are often defined ...
