Natural Gas Fuel For The

Natural gas is the world's cleanest fossil fuel; it generates less air pollution and releases less CO2 per unit of useful energy than liquid fuels or coals. With its vast supplies of conventional resources and nonconventional stores, the extension of long-distance gas pipelines and the recent expansion of liquefied natural gas trade, a truly global market has been created for this clean fuel.

Natural gas is an odorless, gaseous mixture of hydrocarbons—predominantly made up of methane (CH4). It accounts for about 30%of the energy used in the United States. About 40% of the fuel goes to electric power productionand the remaining is split between residential and commercial uses, such as heating and cooking, and industrial uses.
