This law describes what happens to momentum when two objects collide. The law states that when two objects collide in a closed system, the total momentum of the two objects before the collision is the same as the total momentum of the two objects after the collision. The momentum of each object may change, but the total momentum must remain the ...

Physics Classroom says: Momentum is "mass in motion". In physics, momentum is a quantity that depends upon how much mass is moving and how fast the mass is moving. As a quantity, it is calculated as the mass of the object multiplied by its velocity. Momentum becomes an importance concept in the understanding of collisions.
