Retina display - Wikipedia

The retina performs all these calculations in parallel while the computer operates on each pixel one at a time. The retina performs no repeated summations and shifting as would a computer. Finally, the horizontal and amacrine cells play a significant role in this process, but that is not represented here.

Retina - Wikipedia

This article is about the HD screens of Apple products. For the heads-up-display technology, see Virtual retinal display.

Retina display - Wikipedia

When introducing the iPhone 4, Steve Jobs said the number of pixels needed for a Retina display is about 300 PPI for a device held 10 to 12 inches from the eye. One way of expressing this as a unit is pixels-per-degree (PPD) which takes into account both the screen resolution and the distance from which the device is viewed.

Retina display - WikiMili, The Best Wikipedia Reader

5K resolution refers to display formats with a horizontal resolution of around 5,000 pixels. The most common 5K resolution is 5120 × 2880, which has an aspect ratio of 16:9 with around 14.7 million pixels (just over seven times as many pixels as 1080p Full HD), with four times the linear resolution of 720p. This resolution is typically used in computer monitors to achieve a higher pixel ...

5K resolution - Wikipedia

The higher resolution is expected for devices that are expected to be used closer to your face. See the iPad 3 and later, iPad Air and later, iPad mini, iPhone, iPhone 5, and iPhone 6 for devices offering a Retina display. For more information. Retina display What does it mean.

Optional 16 GB at the time of purchase only. 128 GB or 256 GB PCIe-based SSD

MacBook - Wikipedia

Retina displays have little to do with the resolution. It's just a resolution where at eye level you won't see any pixels, while 4k TVs (really UltraHD, because they're 2160p tvs not 4k tvs), can show pixels if the TV is large enough. For instance, Vizio has TV's that are 4k 65", and you can clearly see the pixels.
