You are given N pairs of numbers. In every pair, the first number is always smaller than the second number. A pair (c, d) can follow another pair (a, b) if b < c. Chain of pairs can be formed in this fashion. You have to find the longest chain which can be formed from the given set of pairs. Example 1:

Sets defined otherwise, for uncountable or indefinite numbers of elements are referred to as infinite sets. Examples: A = {a, e, i, o, u} is a finite set because it represents the vowel letters in the English alphabetical series.

Types of Sets: Null, Finite, Singleton Sets, Concepts ...
Approach: The idea is to use two sets say (U and V) and traverse the graph in a BFS manner. Traverse each vertex, mark it as visited, check if the neighboring vertices are present in the sets or not. If not, then insert it into the set opposite of the current one. If yes, then if they are in the same set then return false.
