Sharepoint 2010 Document Id Persistence

Officially the default behaviour of document ids within SharePoint 2010 is "non-persistence" . i.e. a document copied from one location to another location within SharePoint will pick up a new Document ID. In the case of sites built from the blank site template documents moved/copied within the site will keep the same document ID. i.e. document A copied to document A(2) ,both have id docidblank-0001.

Document ID Persistence - Blank Site Templates do not ...

During copy operations SharePoint Server 2010 assigns a new document ID. You can control this by setting a Boolean operator on the PersistID column. When a document ID is assigned it is exposed as metadata, and the server exposes a static URL so that the item to which the document ID is assigned can be recognized by its document ID.

Document IDs and the DocID Service in SharePoint Server ...

For SharePoint Server the only way to retain a Document ID within sites is to use the Site Content and Structure administrative page in Site Settings while moving documents. Copying files with a Document ID. When a copy of a file is made, a new Document ID is created for the copy.
