The formula weight (often used interchangeably with molecular weight) of a compound will be listed in grams/mole (g/mol) on the side of the chemical bottle. If you cannot find the formula weight on the bottle, you can search for the compound online to find it. For example: The formula weight of sodium chloride (NaCl) 58.44 g/mol.

Many SSD vendors will define the SSD warranty period according to these two factors. In addition, the two factors can be converted. This is the formula: $TBW * 1000 / (\text{warranty period} * 365 * \text{SSD capacity}) = \text{DWPD}$.

How to Know Your SSD's Lifespan and How to Increase Its Life

Well, for most SSD health check tools, they can be used to test the SSD transfer speed, measure SSD performance, optimize SSD, etc. Some of them even allow you to erase SSD securely. Given to that fact, you'd better read the software's description carefully to check if it contains the feature you need.

However, if you record a large image backup on an SSD every day (e.g., 170 GB on a 180 GB disk), it can actually get tight after a few years. With a view to greater continuous use, a DWPD value is often given for SSDs: The manufacturer Kingston specifies a “Drive Writes Per Day” value of 0.30 for its DC400 DW SSD model (480 GB storage capacity).). The value is calculated using a formula ...

That is why just "Price/GB = Value" formula won't work on SSD. Now, every company has their way of programming their product. There are various types of NAND modes in SSD like SLC, MLC, TLC, eMLC, QLC.. where SLC is most expensive but very durable and suitable for enterprise/business. QLC being cheapest but less durable.

The Current Divider Formula. With a little bit of algebra, we can derive a formula for determining parallel resistor current given nothing more than total current, individual resistance, and total resistance: The ratio of total resistance to individual resistance is the same ratio as the individual (branch) current to the total current.
