Groundwater is a part of the natural water cycle (check out our interactive water cycle diagram). Some part of the precipitation that lands on the ground surface infiltrates into the subsurface. The part that continues downward through the soil until it reaches rock material that is saturated is groundwater recharge.

Groundwater: What is Groundwater? | U.S. Geological Survey

Less water separating clothes means more friction between fabrics, creating optimal wash action. Less water also means concentrated cleaning. Rather than diluting detergent as done in traditional-style deep fill washers, low water levels help target hard to clean soils and stains.
